Removal of Oromocto Light-house.—A new light-house at Oromocto, in the province of New Brunswick, on the west shore of the river St. John between St. John and Fredericton, was put in operation on the 1st October, 1895. This light-house stands on low ground on the shore of the river, 1,224 feet SE by E $\frac{1}{2}$ E from the old light-house near the head of the public wharf. Latitude, 45° 51' 10" N; longitude, 66° 19' 3" W. The light is fixed white, elevated 52 feet above the ordinary level of the river, and should be visible down the river to the bend at Middle Island, up stream towards the mouth of the river Oromocto, and up the river St. John towards Fredericton. The illuminating apparatus is dioptric of the seventh order. The light tower stands on a crib work pier. It is a square wooden pyramidal building painted white, surmounted by a square wooden lantern painted red. The height from the deck of the pier to the vane on the lantern is 47 feet. Vessels bound up can steer for the light W by S $\frac{1}{2}$ S as soon as they clear Middle Island shoal, and keep their course until past the south end of Oromocto Island; they then leave the light on the port hand, following the trend of Oromocto Island in mid channel, until they bring Oromocto light astern and Wilmot Bluff light ahead when they steer NW $\frac{1}{2}$ N for the latter light. Vessels bound down reverse these directions. When this new light went into operation the mast light formerly maintained near the head of Oromocto wharf was discontinued and the structure removed.

Tracadie.—The tower from which the inner or back range light at Tracadie was exhibited, at the west entrance to Tracadie Bay, on the north or Gulf of St. Lawrence coast of Prince Edward Island, has been replaced by a new tower. Approximate position Latitude N 46° 25' 35''; longitude W 63° 2' 30''. The new tower is a square, wooden building, painted white. The upper portion of the tapering building forms the lantern. The height from the ground to the top of the ventilator is 28 feet. The light is a fixed red, catoptric light. It is elevated 32 feet above high water mark, and should be visible in the line of range and up the coast in a northwesterly direction 8 miles. The tower stands on the gravel beach, near the site of the old one which it replaces, 1,200 feet S S W from the front range light; but this course and distance is liable to be changed at any time, without notice, to make the alignment suit the changes in the shifting channel.

Petitdegrat Island, C. B.—The fixed red light in Petitdegrat Inlet, southeast of Madame Island, in the county of Richmond, C. B., has always been described and shown as being on Big Arrow rock, whereas it is built and has always been maintained on Mouse Island, farther up the inlet. Latitude N 45° 29' 54''; longitude W 60° 57' 24''.

South Tracadie.—The front range light building at South Tracadie, on the northeast, or Gulf of St. Lawrence, coast of New Brunswick, has been moved 80 feet northeastwardly to suit a change in the channel over the bar which lies outside of South Tracadie Gully. Latitude, 47° 30' 05''; longitude, 64° 52' 10''. The front tower now stands 276 feet SE by S $\frac{3}{4}$ S (S 51° E true) from the back range light, and the two lights in one lead in from the strait NW by N $\frac{3}{4}$ N (N 51° W true) through the channel over the bar.

North Tracadie Gully.—The channel over the bar at North Tracadie Gully, off the northeast coast of New Brunswick, Gulf of St. Lawrence, which was marked by range lights on the north side of the Gully, is now filling up and a new channel through the bar has formed farther north. As this new channel now carries much better water and is much shorter than the old one, the buoys and lights have been rearranged to lead through it, as follows:—The range lights on the north side of the Gully have been discontinued. The front building of this range has been moved back to the south side of the Gully and has been placed so as to form a range with the main light to lead through the channel over the bar. It now stands 109 feet SE by E $\frac{1}{2}$ E from the main light in the tower. It is, as heretofore, fixed white, shown from a lantern hoisted on a pole 20 feet high, having a small shed at its base, painted white. The light is elevated 24 feet above high water mark, and should be visible 6 miles. The lantern is a tubular lantern with a pressed glass lens. The red can buoy which formerly marked the outer end of the more southerly channel has been moved northwards to mark this new channel. It is now moored in five fathoms on the outer edge of the bar at the point where vessels should cross it and pick up the line of the range lights, and bears SE by E from the main light. To mark the channel over the bar three red spar buoys have been placed at the turn on the north side

of the channel, and a black spar buoy and a red can buoy on the south side. A red spar buoy is also moored on the east point of the sand bar inside the Gully southwestwardly from the main light tower. The channel is between this buoy and the light-house. Vessels entering the Gully should bring the two lights in range, and steer NW by W $\frac{1}{2}$ W until near the inner can buoy, then they should haul up north by west, round the south end of the beach, keeping close to it and leaving the light on the port hand, which will bring them inside the beach and out of danger.

Lower Neguac Range Lights.—The front light stands on the east end of the block at the outer end of the Lower Neguac wharf. Latitude $47^{\circ} 15' 40''$; longitude $65^{\circ} 2' 35''$ W. The light is shown from a lens lantern hoisted on a mast, having a shed at the base, the whole painted white; an oval flatwork is attached to the mast to make it more conspicuous as a day beacon; the mast is 14 feet from the pier to its top; light is fixed red, elevated 28 feet above high water mark, and should be visible 8 miles from all points of approach; besides indicating the line of range it will serve as a guide to vessels making the wharf. The wharf on which the outer light stands is composed of a cribwork block 25 by 50 feet, in about 8 feet water, connected with the shore by a roadway supported on temporary trestles; the roadway runs N and is 1050 feet long to high water mark, where it ends near Adams' house and store. The back light building stands on the beach, N N W $\frac{1}{4}$ (N $49^{\circ} 50'$ W true), 1080 feet from the front one; it is a square wooden closed tower painted white, surmounted by a lantern painted red; it is 33 feet high from its base to the vane on the lantern; light is fixed white; it is elevated 32 feet above high water mark, and should be visible 10 miles in all directions over a small arc on each side of the line of range.

Shediac North Channel Range Lights.—Two range lights, temporarily established by the government of Canada on the beach at Pointe du Chene, Shediac Bay, Northumberland Strait, on the east coast of New Brunswick, the purpose of guiding vessels into Shediac harbor through the channel north and west of Zephyr and Medea rocks, were put in operation on 29th August, 1895. The mast on which the front range lantern is hoisted stands on the northern-most part of Pointe du Chene, 349 feet from water's edge, and is 20 feet high, with a shed at its base, painted white. Latitude, $46^{\circ} 14' 43''$ N; longitude, $64^{\circ} 30' 48''$ W. The light is a fixed red light elevated 32 feet above high water mark, and should be visible 7 miles in, and over a small arc on each side of, the line of range. The light is shown from a tubular lantern with pressed glass lens. The back mast stands 602 feet SW by S ($S 10\frac{1}{2}^{\circ}$ W true) from the front one and is 28 feet high, with a white shed at its base. The light is similar to the front one, 38 feet above high water mark, and should be visible 7 miles. To enter Shediac harbor by this channel vessels should steer for Cassie Point light until they bring these two red lights in one, bearing SW by S ($S 10\frac{1}{2}^{\circ}$ true), and should keep them in one until they reach the alignment of Shediac Island range lights, when they haul up W by N $\frac{1}{2}$ N ($S 81^{\circ}$ W true). As when entering by the South channel they keep the Shediac Island range lights in one until the Pointe du Chene railway wharf lights are brought into range.

The front range tower stands in the alignment of the masts, 72 feet E by S $\frac{1}{2}$ S from

The lantern and lantern base are painted red; the remainder of the tower is white. The light will be a fixed white catoptric light elevated 36 feet above high water mark, and should be visible 11 miles in, and over a small arc on each side of, the line of range. It will also show southwardly into the harbor. The back tower stands near the inner shore of the island and is distant 619 feet W by $N \frac{1}{2} N$ from the new front tower. It is in the alignment of the old lights. The building and light are similar to those above described for the front light, except that the tower is 47 feet high and that the light is 52 feet above high water mark and should be visible 12 miles in the line of range. The two lights in one bearing W by $N \frac{1}{2} N$ ($S 81^{\circ} W$ true) will lead into Shediac harbor from Northumberland Strait, south of Medea and Zephyr rocks, with nowhere less than 15 feet water, and should be kept in one until the Pointe du Chene railway wharf lights are brought into one.

Davis' Ledge Buoy bears E by S; Boston light bears N W $\frac{1}{4}$ W 7 miles. This course must be kept good, northerly, to pass Pell Boat, off the north side of the Harding's Ledge (about $4\frac{1}{2}$ miles from Minot's Ledge Light). A good mark to clear the Harding's Bell Boat, after passing Minot's light, is to keep Long Island Head light (fixed white) just open to the north of the Narrows Light, which is a red light.

Nix Mate Light Buoy.—A gas buoy, painted black and showing a fixed white light, just inside of Nix Mate bell buoy, entrance to Boston harbor, Mass. In the ice runs strongly, this and similar buoys in the entrances to Boston harbor will be taken up.

First-class steam siren; blasts 5 seconds, alternate silent intervals of 10 and 4 seconds. From Cape Cod highlands the course for Boston Light is N W by W $\frac{1}{4}$ W, which well clears Minot's Ledge and the Hardings; then, when well past Minot's, bring Boston light to bear W by N $\frac{1}{4}$ N and run for it until within $\frac{1}{2}$ of a mile of it or until the Beacon light bears about W by N, then run W $\frac{1}{4}$ S until the Beacon light bears W N W, then run W by N leaving the Beacon light 100 yards on your starboard hand, then steer N W $\frac{1}{4}$ W (keeping the middle of the channel) for the Narrows between Galloupe and Lovell's Islands, then about N W $\frac{3}{4}$ N for the bell buoy off Nix's Mate, which leave on port hand, then run W by N $\frac{1}{4}$ N for Fort Independence, leaving the lower middle buoy, red can, No. 6, a good berth on your starboard, and Star Ledge buoy, red Nun No. 8 close aboard on your starboard; then run about N W $\frac{1}{4}$ N for the upper middle buoy, black Nun No. 9, which leave on your port, then the course to Long Wharf or to good anchorage is about N W $\frac{1}{4}$ W. If making Boston ship channel from Cape Ann, get Thatcher's Island light to bear N N W from 2 to 3 miles, then steer S W $\frac{1}{4}$ W until Boston light bears W by N $\frac{1}{4}$ N. CANADIAN STORM WARNINGS.

ISSUED FOR QUEBEC AND THE MARITIME PROVINCES.

Fig. No. 1—This signal indicates "moderate gale is expected at from an easterly direction."

Fig. No. 2—This signal indicates "moderate gale is expected at from a westerly direction."

Fig. No. 3—This signal indicates "fresh to heavy gale is expected first from an easterly direction."

Fig. No. 4—This signal indicates "fresh to heavy gale is expected first from a westerly direction."

The Cone, when hoisted by itself, indicates that it is expected that wind will attain a velocity of 30 miles an hour, but will not exceed 40 miles an hour, and it is not intended that an ordinary well found vessel should stay in port, but simply as a warning to mariners that strong winds are expected from the quarter indicated.

The Drum will always be hoisted when the velocity of the wind is expected to exceed 40 miles an hour.

The night signal corresponding to Nos. 1 and 3, is two white lanterns hanging perpendicularly.

Night signal corresponding to Nos. 2 and 4, is two white lanterns hanging horizontally.

Note 1—Mariners will be able to obtain further information from Signal Agents, or by consulting the daily probabilities.

Note 2—Mariners must always bear in mind that the storm signals are merely cautionary, and do not necessarily mean that a storm will occur at the place where the signal is displayed, but that one is expected either there or within such a distance that vessels leaving port would be liable to be caught in it.

Morning and Evening Stars.

VENUS is a morning star until July 9th, and an evening star for the remainder of the year.

MARS is a morning star until December 10th, and an evening star for the remainder of the year.

JUPITER is a morning star until January 24th, when he is in opposition to the sun, then an evening star until August 11th, and a morning star for the remainder of the year.

SATURN is a morning star until May 5th, when he is in opposition to the sun, then an evening star until November 13th, and a morning star for the remainder of the year.

Explanatory.

Annular Eclipse—An eclipse of the Sun, in which its whole disk is covered by the Moon, except a bright outer ring.

Aphelion—The point of a planet's orbit farthest from the Sun.

Apogee—That part of the Moon's orbit farthest from the Earth.

Astronomical Day is reckoned from noon to noon through the 24 hours. Thus, July 21, 9h, is 9h A of July 21, and July 21, 15h, is 3h M of July 22.

Conjunction—A planet directly between the Earth and the Sun is said to be in Inferior Conjunction with the Sun. A Planet with the Sun directly between it and the Earth is said to be in Superior Conjunction with the Sun. Planets are said to be in conjunction with each other, or with the Moon, when they are in the same sign and degree.

Declination—The distance of a heavenly body from the Equinoctial, measured north or south, in degrees or minutes, on a Meridian.

Ecliptic—The plane of the Earth's orbit, so called because Eclipses can take place only when the Moon is on or near it.

Elongation—The distance of a Planet from the Sun as seen from the Earth.

Equinoctial—The circle in the heavens traced by the Earth's Equator.

Node—That part of the orbit of a heavenly body which intercepts the Ecliptic. If the body is passing from south to north, it is called the Ascending Node; if from north to south, Descending.

Opposition—A planet with the Earth directly between it and the Sun is said to be in opposition to the Sun.

Penumbra—That portion of space around the shadow of the Earth, in passing through which the Moon diminishes in brightness in consequence of a part only of the Sun's rays reaching her surface.

Perigee—That part of the Moon's orbit nearest to the Earth.

Perihelion—That part of the Planet's orbit nearest to the Sun.

The Sun's Declination and fast or slow of clock are given for apparent or time of passing the Meridian of St. John.

The Moon's Southing is given in Astronomical time for the Meridian sage at St. John; and her Declination, when on the Meridian.

The Rising and Setting of the Moon are given for every day in the year.

To find the length of the day, subtract the time of sunrise from 12 h and to the difference add the time of sunset.

To find the length of the night, subtract the time of sunset from 12 h and to the difference add the time of sunrise next morning.

Tides.

When the Moon is near the Full, and change, the Tides rise higher usual—these are called Spring Tides; and when the Moon is near her and third quarters the Tides rise less than usual—these are called Tides. If the Moon near the full or change is in her Perigee, or ne approach to the Earth, it will be very high Tides, and if at that time s in her Apogee, or farthest distance from the earth, the Tides will flow less.

On account of the disturbing force of the winds it is not possible at (by astronomical calculations) to predict the exact time and height of and low water; when the winds blow strong on shore, the effect is to inc the Tides and make them later, but when the winds blow off shore, the is to diminish them and make them earlier.

The Tides in the Calendar are the Morning and Afternoon Tides at St. John and Charlottetown. In the Tide Table (page 52) will be found constants for finding the time of High Water at each of the places given in the table.

It will sometimes be found that when a Constant is added to the time of High Water at the port of reference the sum exceeds 12 hours; in this case subtract 12 hours from the sum and the remainder will be the time of High Water at the required port on the succeeding afternoon or morning, according as the Tide at the port of reference was a Morning or Afternoon Tide.

EXAMPLE.

High Water at St. John, January 15th	11h. 45m. M.
Moncton, add.....	54m.
	12h. 39m.
Subtract.....	12h. 00m.
High Water at Moncton, January 15th.....	0h. 39m. A.

It will sometimes be found that a Constant to be subtracted is greater than the time of High Water at the port of reference; in this case add 12 hours to the time at the port, subtract the Constant, and the remainder will be the time of High Water at the required place for the previous Morning or Afternoon Tide, according as the Tide at the port of reference was an Afternoon or Morning Tide.

EXAMPLE.

Forecasting the Weather.

Men have, from a very early period, studied the weather, on account of its great influence on their pursuits, in order, if possible, to predict its nature, and prevent those losses to the farmer and the sailor which result from violent storms.

The earlier students based their predictions on the phases of the moon, and an examination of the Greenwich observations for more than half a century has shown that this theory is entirely unfounded. Weather prophets, Moore, Zadkiel and Vennor claim in their almanacs to be able to forecast the weather day by day for a whole year; but meteorological science in the British Isles, and the Signal Service of the United States, with the Weather Bureau of the Dominion, does not claim to forecast, with any certainty, the weather for more than three or four days at the most.

If an observer could obtain, at regular and repeated intervals, readings of the Barometer at stations distributed over a large area, he would be enabled to trace the march of the storm, for it has been found that the wind always blows towards the place of the lowest barometer reading; and so, by means of the telegraph, he may warn those places the storm is approaching. Mistakes are often made, and the forecasts are not always infallible, so much remains to be done before meteorology can be ranked among the exact sciences.

Tide Table.

The time of High Water in the following places will be found approximately by adding to or subtracting from the time of High Water at the given port of reference, as follows:

To Find the Latitude by a Meridian Altitude of the Sun.

The Sun's Declination in the Calendars of the Month are for the Meridian of St. John, N. B., but will serve with sufficient accuracy to obtain the Latitude by Meridian Altitude of the Sun on any part of the coast of New Brunswick and Nova Scotia, and on the coast of Maine and Massachusetts, in the United States.

Rule.—At noon obtain the altitude of the Sun by a Sextant or Quadrant, add 12 miles to that altitude to obtain the true altitude; subtract the altitude from $90^{\circ} 0'$ and you will have the Sun's Zenith distance, which will name North, as the Sun will always bear to the South at noon on the coast. Under the Zenith distance place the Sun's Declination for that day. Then if the Declination and Zenith distance are of different names, the difference will be the Latitude; if they are of the same name, their sum will be the Latitude.

Example.—1896, February 3rd, at noon, off Cape Sable, N. S., the observed altitude of the Sun was $30^{\circ} 20'$, bearing South. Required the ship's Latitude.

Example 2.—1896, April 7th, at noon, off Mt. Desert Rock, coast of Maine, U. S., the observed altitude of the Sun was $52^{\circ} 52'$, bearing South. Required the ship's Latitude.

Registered articles should be prepaid.

Every article intended for registration must be handed in at the wicket, and a receipt obtained therefor; on no account must it be dropped into a letter box. The registration fee should be paid by stamp.

United States, without being taken out of the Post Office, are not liable to an additional postage.

Letters sent to or received from a country of the Postal Union, and afterwards re-directed to any place in Canada, or to a country in the Postal Union, will be forwarded, even if taken out of the office and re-addressed; but if re-addressed to a place where there is a higher rate of postage, the difference of postage will be chargeable.

Matter Which Cannot be Forwarded Through the Post.—Any explosive substance, glass, liquid, or other matter likely to entail risk or injury to the ordinary contents of the mail, will be sent to the Dead Letter Office, Ottawa.

Letters containing gold or silver money, jewels, or precious articles, or anything liable to Customs duties, cannot be forwarded by post to any of the Postal Union countries except the United States.

Important.—A letter once posted becomes the property of the person to whom it is addressed, and must be forwarded according to its direction. On no application, however urgent, can it be delivered back to the writer, or to any other person.

To enclose writing, intended to serve the purposes of a letter, in a newspaper packet or in a parcel, is an offence punishable by a fine of from \$10 to \$40.

Sale of Postage Stamps.—Any person, other than a Postmaster, who engages in the sale of Postage Stamps or Stamped Envelopes, without being duly licensed by the Postmaster General, is liable, on conviction before a Justice of the Peace, to a penalty of \$40 for each offence.

Request Letters.—Unregistered letters from places in Canada, Newfoundland and the United States, enclosed in envelopes having printed thereon a REQUEST that the letters be returned to the sender if not delivered within a certain specified time, will be returned as requested, if not delivered at the time stated.

Useful Hints.

Never send money or other articles of value through the Post Office except either by Money Order or Registered Letter.

Make complaints and inquiries in writing.

Envelopes closed and simply clipped at the ends cannot be forwarded by Book Post. Affix stamps securely, and on the upper right hand corner.

Register all valuable letters.

Send money by Money Order whenever practicable.

Preserve, and request correspondents to preserve, envelopes of mis-sent or delayed letters.

Business men should be careful to authorize but a limited number of persons to receive their letters, and only those in whom they have full confidence.

Have a letter box on the door of residence and office.

Letters addressed to mere initials, or fictitious names, will not be delivered unless addressed in care of a resident, or to some box in the Post Office.

Mutilated Stamps.

Letters having mutilated stamps, or stamps so soiled and defaced as to make it impossible for the sorting clerks to decide whether they have been used before or not, will be sent to the Postmaster General for his adjudication; and if it can be shown that such stamps had been previously used, the offender will be liable to a fine of from \$10 to \$40.

KID GLOVES DYED BLACK,

McMILLAN'S PEN DEPARTMENT CONTAINS GOODS FROM ALL MAKERS.

Post Bands and Stamped Envelopes.

One cent post bands for newspaper or book packet wrappers, and one and three cent stamped envelopes are issued by the Department, and may be had at the stamp vendors at a trifle above their face value.

Merchants' Boxes.

Rent of small box \$4, and of large box \$6 a year.

Though every effort will be made in sorting letters to place them in the boxes, when the party addressed is known to have a box, the Postmaster does not hold himself responsible for this always being done, the primary rule being that all letters bearing the number of the house and name of street go there by letter carrier.

An order to place in a box letters belonging to another person than the owner of the box, cannot be recognized unless such letters are addressed to the care of the box or its owner.

Letters for a member of a firm should be addressed to the care of the firm or the number of the box.

Box-holders would facilitate the work of sorting by requesting correspondents to add the box number to the address of their letters.

St. John Letter Carriers' Delivery.

Letters and Papers should be addressed to Street and Number.

Change of Residence should be promptly notified to the Postmaster.

Two deliveries daily, commencing at 7.30 a m and 3.00 p m. On public holidays there is no afternoon delivery.

Letters not bearing the name and number of street, addressed to parties whose address may be known to the Carriers, will be delivered by them. It is always best, however, to have name of street and number of house supplied.

Time Ball, Customs Building.

The Ball will be hoisted half its elevation each day (Sunday excepted) at fifteen minutes before one o'clock. At one minute before one o'clock it will be hoisted its full height; and at one o'clock, mean time, the Ball will be dropped. A chronometer keeping correct Greenwich time should then show 5h. 24m. 16s., and the difference between this and the time shown by a chronometer is its true error on Greenwich time at the moment. As the above hour of one o'clock, when the ball drops, represents 5h. 24m. 16s. at Greenwich, the error of a chronometer may be ascertained, no matter where the ship is lying. Masters of vessels arriving at St. John should compare their chronometers by the Time Ball, as it will enable them to get the sea rate, which frequently varies from harbor rates. Latitude 45° 16' 42" North. Longitude in time 4h. 24m. 16s. west of Greenwich.

D. LEAVITT HUTCHINSON, *Director*.

P. S.—Any shipmaster entering this port, keeping a Meteorological Register who may be desirous of having the accuracy of their barometers verified, can do so by comparison with the standard at the Observatory. D. L. H.
